

The Therapy

A Patented Topical Formulation for Migraine

Now sumatriptan comes in a revolutionary topical delivery system for non-systemic and customizable patient care.

Introducing a patented Topical Regional Neuro-Affective (TRNA) therapy for the treatment of migraine headaches. Through topical application and delivery, the formulation can provide a therapeutic dose of sumatriptan directly to an affected area. The therapy is unique in providing a therapeutic benefit while avoiding both systemic and cerebral blood (1).

This innovative route of administration may allow healthcare professionals to consider a different approach for the migraine sufferer unable to get treatment success from a systemic therapy.

Topical Regional Neuro-Affective (TRNA) Therapy is (1):

- A non systemic drug
- Formulated as a topical cream
- Compounded in a dermal penetration enhancing medium
- Applied to the BONATH region (Back of the Neck at the Hairline)
