All cats are treated for 84 days (minimum).

Blood work is recommended at dx and at 30, 60 and 80 days.

Recommended panels are CBC and Chem panel (with proteins).

- Following treatment, after bloodwork and physical exam are satisfactory, patient enters 12 weeks of observation.
- Patient should appear normal, with the exception of a small percentage who may have permanent neurological symptoms.
- No further treatment is necessary unless relapse occurs.†
- During observation, blood work should be run every 4-6 weeks until observation ends.
- Upon completing 12 weeks of observation (without relapse), the patient is considered cured of FIP.

## Dosing<sup>1</sup> for compounded injectable GS (based on bioavailability)\*

- Wet abdominal/dry FIP - treat at 8mg/kg, q24h
- Ocular/neurological FIP - treat at 10mg/kg, q24h

## Dosing<sup>1</sup> for compounded oral GS (based on bioavailability)\*\*

- Wet abdominal/dry FIP - treat at 15mg/kg, q24h
- Ocular/neurological FIP - treat at 20mg/kg, q24h

## Critical cases:

- For critical patients, q12 dosing is recommended for the first 5-7 days until the patient is stable. Critical patients can be transitioned to oral GS once they are stable (eating well and without vomiting or diarrhea).
- At that time, move to q24 dosing.
- Oral GS can be started once patient is stable (eating well and without vomiting or diarrhea).

\*Compounded injectable GS formulations are labeled assuming 100% bioavailability<sup>2</sup>.

\*\*Compounded oral GS formulations contain, and are labeled for, TOTAL milligrams of active ingredient per capsule (which has approximately 50% bioavailability by mouth)<sup>2</sup>.

# Saving Cats' Lives, One at a Time with GS Therapy for Feline Infectious Peritonitis (FIP)

TOWN & COUNTRY  
Compounding Pharmacy  
We compound quality

Town & Country Compounding has GS-441524 capsules in stock!  
Ready to ship (with Rx) quickly to cat parents!

## GS-441524 Rx Order Form

It's easy for licensed practitioners to prescribe GS-441524 capsules for felines with our pharmacy.

For too long, a diagnosis of Feline Infectious Peritonitis (FIP) was considered a death sentence, leaving cat owners heartbroken and veterinarians with limited options. But that's changing, thanks to a groundbreaking antiviral compound known as GS-441524. Prior to GS-441524, FIP was considered untreatable, and affected cats were often euthanized. This compound has revolutionized the management of FIP, offering hope to cat owners and veterinarians.

## Hope for FIP-affected cats

Town & Country Compounding has GS Capsules in stock, ready for pickup, shipping or delivery to help sick kitties with FIP.

## What is FIP, and why is GS-441524 a game-changer?

FIP is a devastating disease caused by the feline coronavirus (FCoV) mutation. It primarily affects young cats and manifests in two forms: the wet form, which leads to fluid buildup in the chest or abdomen, and the dry form, which causes severe organ damage. **GS-441524 is a powerful antiviral that has revolutionized the therapy for FIP.**

An active metabolite of remdesivir, it works by inhibiting the replication of the coronavirus within infected cells, allowing the cat's immune system to gain control over the infection. Before the development of GS-441524, there were no therapies that addressed FIP. **A diagnosis was often considered a death sentence for the cat.**

Veterinarians with access to this drug have helped countless cats go into remission and live healthy, full lives after GS therapy.

## Our commitment to cats with FIP

At Town & Country Compounding, we are one of the few pharmacies in the country able to supply compounded oral GS-441524 capsules. Our dedication to this cause goes beyond simply providing the medication — we are here to partner with veterinarians and organizations who share our mission to save lives.

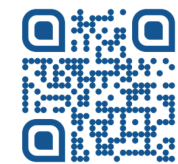

We understand the urgency and hope that GS-441524 brings to cat owners and veterinarians alike. That's why we take pride in ensuring that our compounded formulations are of the highest quality, made with precision and care, to support the best possible outcomes for cats battling FIP.
